## Mechanical Descaling Machinery

### Model 1060 Descaling System with Lubricant Precoating

- Applies lubricant precoat in final descaling stage to increase material drawability.
- Uses commercially available lubricant precoat compounds.
- Efficient air wiping eliminates bulky drying drum.
- All key components are high grade stainless steel for maximum corrosion resistance.
- Standard WILCO Coarse Scale Breaker design is proven to perform with minimal maintenance.

Applying lubricant precoat in a liquid state the WILCO Model 1060 improves drawability as precoating compounds have lubricating properties and also act as a carrier coating aiding lube pickup. The WILCO 1060 is suitable for drawing operations producing various wire products.

### Model 200-S Scale Collector

- 9 cartridge filters effectively remove and contain scale from up to two WILCO Descaling Systems.
- Automatic reverse pulse filter cleaning.
- Scale deposited into a re-useable 50 gallon (190 liter) steel drum.
- Optional secondary vacuum system for general work area cleaning up to 50 feet (15m) around unit.
- Small footprint - unit is only 1 meter square by 4 meters high.

The WILCO 200 Scale Collector is an important accessory for maintaining a healthy shop environment. Scale can be generated at rates more than 5kg per rod bundle rapidly becoming a problem. The WILCO 200 will handle all scale and provide a useful means for general shop cleanup.
